For example, the Background Eraser Tool can now remove a background, and the Gradient tool can be used to create a new, merged layer mask. There are other great new features that help you get more out of your editing tools, such as droplet systems, smart dodge, and blur painting. Smart Filters: You can now create a set of adjustments within a group of filter options called adjustments. For example, if you use an adjustment, you can now adjust that adjustment within the group of filters. Or, you can re-configure the filter to use multiple settings for a single adjustment feature. Like in previous years, a new Photoshop feature is being released in a subscription version for a limited time. As before, the new feature will be available for only a limited time for one year. The first of these new features is called Colors and is being introduced as a stand-alone photography app for iPhone and iPad. With this application, photographers can save color histogram details along with their image adjustments and quickly analyze all these details.
